

HB 1117 -- Information for Maternity Patients

Sponsor: Davis

This bill requires the Department of Health and Senior Services to design an informational leaflet about maternity-related procedures, practices, care, and statistics. Every licensed hospital and birthing center will be required by the department to prepare the information leaflet in a printed or photocopied form and to distribute it directly to each prospective maternity patient and to the general public, upon request. The leaflet must include statistics related to the annual percentage of specified maternity-related procedures performed at the facility.
