

HB 1621 -- ELECTRONIC BIRTH AND DEATH REGISTRATION SYSTEM

SPONSOR: Frederick

This bill specifies requirements for an electronic birth or death registration system in the state that utilizes a secure login for data provers. The system must not require a data provider to change his or her authentication data, including but not limited to user identification and passwords, more often than once annually. The system must provide a secure mechanism for a data provider to regain access to the system via a "forgot password" function in the event a provider is unable to recall his or her password or other authentication data.
