

HB 1084 -- Customer-Specific Pricing

Sponsor: Emery

This bill authorizes customer-specific pricing for DS-1 retail services, which are defined as any tariffed retail service offered to business customers which is provided via facilities capable of operating at speeds of 1.544 megabytes per second or higher, including ISDN, PRI, and DSI trunk services.

The bill also states that when a business service offered by an incumbent local exchange telecommunications company has been classified as competitive, customer-specific pricing for that business service must be equally available to incumbent and alternative local exchange telecommunications companies.
