

HB 2155 -- Life Sciences Research Board Grants

Sponsor: Hughes

This bill requires the Life Sciences Research Board to establish a program, subject to appropriations, to award grants for the retrofitting of existing factory facilities for the production of supplies and technology related to human stem cell research. Recipients of the grants must enter into contracts agreeing to operate and maintain a facility until the eighth anniversary of the awarded grant, produce supplies and technologies used in human stem cell research, and comply with the financial or reporting requirements imposed by the board.
