FISCAL ANALYSIS

ASSUMPTION

Officials from the **Department of Economic Development - Public Service Commission (PSC)** and **Office of Public Counsel** each assume the proposal will have no fiscal impact on their respective organizations.

Officials from the **Department of Economic Development - Division of Energy (DE)** participates in PSC regulatory cases to evaluate issues from a formal state policy and planning perspective consistent with its interests in clean, affordable, abundant energy, and its efficient use. DE is active in cases before the PSC related to energy efficiency and renewable energy. As such, DE assumes it would be involved in the implementation of this proposal that allows water and sewer corporations to seek approval from the Public Service Commission for rate schedules authorizing rate adjustments outside of rate cases due to revenue variation from increases or decreases in residential, commercial, public authority and sale for resale usage.

The Missouri Comprehensive State Energy Plan reported that significant amounts of energy are required in the treatment of water and wastewater and its delivery and distribution. As such, there is a linkage between water and energy and efforts to increase efficiencies in water treatment, transportation and usage by residents and businesses. Because of this linkage, DE is now participating in water and sewer utility cases before the PSC to evaluate and promote the efficient use of water.

There is no identifiable direct fiscal impact to the Division of Energy by this bill alone; however, there would be a cumulative fiscal impact to DE if more than one bill related to PSC regulatory issues passes due to DE's involvement in such cases.

Section 386.266

Officials from the **Office of Administration - Facilities Management Design and Construction (FMDC)** state that currently, electrical corporations may make an application to the Public Service Commission to approve rate schedules authorizing an interim energy charge for fuel and purchased-power costs. Under this act, such rate schedules shall provide for adjustments reflecting all transmission charges and transmission revenues. Further, electrical corporations may file to amend such existing rate schedules and begin rate recovery without filing a general rate proceeding.

ASSUMPTION (continued)

This bill enables water and sewer corporations to apply to the Public Service Commission for an interim rate change outside of a general rate proceeding to ensure that revenue requirements are met. Without additional information, FMDC is unable to accurately calculate the impact of this bill. However, an estimate is provided below.

In the last three fiscal years, FMDC has averaged \$2.7 million in water and sewer expenditures. A 2.5% (cap) increase in rates because of this bill would cost the state approximately \$66,414 annually.

Oversight will show a cost of \$0 or (Unknown) for possible increases in utility costs.

Officials from the **Attorney General's Office (AGO)** assume any potential cost arising from this proposal can be absorbed with existing resources. AGO may seek additional appropriations if the proposal results in a significant increase in cases.

Officials from the **Department of Natural Resources** and the **Metropolitan St. Louis Sewer District** each assume the proposal will have no fiscal impact on their respective organizations.
