

HB 1877 -- EMINENT DOMAIN

SPONSOR: Hansen

This bill specifies the owner of a transmission line of 200 kilovolts or higher does not have the power of eminent domain unless the line includes electric substations constructed at intervals of less than 50 miles that are necessary to accommodate both the purchase and sale of electricity within the state and elsewhere and the owner of the line has been directed or designated to construct the line by a regional transmission organization by the Federal Energy Regulatory Commission.

This bill is similar to HB 1062 (2019).
